The Trustee and the Investment Manager will arrange for your Application Money to be paid directly into the Broker’s bank account or in a Fund account once your Application has been accepted.

7. INVESTMENT MANDATE AND STRATEGY

Investment Objective

The primary investment objective of the Fund is to provide similar access to public capital raisings as institutional fund investors. The investment objective aims to deliver an investment return greater than the RBA cash rate plus 2% per annum over a rolling 5 year period.

Note that the stated investment return objective is not intended to be a forecast. It is merely an indication of what the Fund aims to achieve over the medium to longer term on the assumption that equity markets remain relatively stable throughout the investment term. Macro and microeconomic market conditions, changes in legislation and fluctuations in economic sensitive instruments like interest rates may mean the Fund may not be successful in meeting this objective. **Returns are not guaranteed.**

Investment Mandate and Strategy

The Fund will invest in listed Australian securities and opportunities that arise in listed corporate capital raising actions (retail or institutional)

The majority of publicly listed company capital raisings are ordinarily the province of high net worth, institutional and sophisticated investors by virtue of the large individual capital commitments required and as a result of the high-risk profile of such investments. Through the Fund, investors will have the opportunity to gain exposure to some of these capital placements through the Investment Manager’s extensive capital markets and broker network. The average investor simply has little or no access to or is very limited in their ability to access a broad and extensive range of these potential funding opportunities.

The Fund will invest in Australian Listed Securities within the official list of the Australia Securities Exchange (ASX) through on-market purchases and listed corporate capital raising actions. For example, private placements, share purchase plans, wholesale placements, rights issues, and placement shortfall underwriting.

If the Investment Manager cannot find attractive investments or opportunities, cash held by the Fund will build up. It is possible that from time to time the Fund will be invested solely in cash.

The portfolio will have a maximum exposure at initial purchase of 10% to a single stock.

The Fund does not permit borrowing, short selling or Derivatives.

The Fund is only suitable for investors who are seeking a higher level of return while accepting a **higher level of risk.**

Any change in the Investment Mandate and Strategy will be notified to investors with a 30 day notice period before implementation.

Asset Allocation

Between 0% and 100% of Assets will be invested in shares in placements.

The Fund will have a maximum exposure at initial purchase of 10% to a single stock.

Compliance with the Fund's investment mandate and performance is reported to the Trustee on a regular basis.

The Investment Manager's policy is to concentrate the portfolio of the Fund where it believes it can maximise the returns derived for the level of risk to which the Fund is exposed.

Assets	Min	Max	Target
Equities	0%	100%	50-95%
Cash	0%	100%	5-50%

Portfolio Rebalancing

The Fund will look to rebalance the portfolio from time to time to reduce the risk of any individual constituent of the fund becoming excessive or representing a disproportionate weighting in the Fund.

Diversification Guidelines

The aim of diversification is to enhance the Fund's performance in an attempt to minimise variation in investment returns across different market conditions. The Fund may have holdings across a diverse range of sectors but does not have a strict diversification policy.

Due to a market driven event, there may be times where the Fund may have a relatively high percentage of its portfolio invested in a limited number of assets, or in assets in a limited number of sectors or industries, which may cause the value of the investments to be more affected by any single adverse economic, political or regulatory event than the investments of a more diversified investment portfolio. The Fund may, at times, be made up entirely of cash.

8. BENEFITS AND RISKS OF INVESTING IN MANAGED INVESTMENT SCHEMES

Benefits:

- Exposure to high quality and experienced primary and secondary market investments.
- Access to public company capital raisings creates potential access to investments for investors which are ordinarily the domain of the institutional market participants.

Risks:

Covid-19 Risk

While the COVID-19 pandemic continues, the investments of and operation of the Fund could be affected in numerous ways. For example, markets may be more volatile than usual, many companies are struggling to stay solvent and there is a risk of investing in such a company, and the management of the Fund could be affected by self-isolation or sickness.

Equity Security Risk

The value of particular shares may be affected by market sentiment and other factors that may impact the performance of the actual company over short or extended periods of time. Investing in shares of a company will expose an investor to many of the risks to which the individual company is itself exposed.

They include many factors, such as changes in management, technology, and a company's financial health, actions of competitors, regulators and market trends. Share markets tend to move in cycles, and the individual share price of a security may fluctuate.

Equities may also be affected by dilutive equity issuance or changes to dividend policy.

Such risk is considered by the investment manager through its investment process. Some investments will be affected by exchange rate fluctuations.

Liquidity Risk

The portfolio will have a maximum exposure at initial purchase of 10% to a single stock.

Liquidity risk may also occur due to the absence of an established market or a shortage of buyers for an investment which can result in a loss if the holder of the investment needs to sell it within a particular timeframe.

Different securities may be typically less liquid than other securities or pose a higher risk of becoming illiquid during times of market stress. The less liquid the security, the more difficult it may be to sell the security when it is desirable to do so or to realise what the Investment Manager perceives to be fair value in the event of a sale.

Market Risk

The Fund may experience investment losses due to factors that affect the overall performance of the financial markets. These events may include changes in macro-economic, regulatory, social, political conditions, weather events, and terrorism; along with changes in technology, the environment and market sentiment. Often assets from less developed regions or markets display higher levels of volatility of investment return than assets in mature markets.

Refer to section 7 for details on the asset mix.

Prime Broker Risk

The Fund is, to a certain extent, reliant on external service providers such as Interactive Brokers in connection with its operation and investment activities. Such services include prime brokerage and custody. There is a risk that the service providers may default in the performance of their obligations or seek to terminate the services with the result that the Fund may be required to seek an alternate supplier and, in the interim, investment activities may be affected.

Please refer to 'Section 6 - Prime Broker and Custodian: Interactive Brokers' and 'Counterparty risk' for more information.

Service Provider Risk

The Fund may be reliant on external service providers in connection with their operation, such as the external data suppliers or order management system (OMS) providers. There is a risk with these arrangements that the service providers may default in the performance of their obligations or seek to terminate the services with the result that the Fund may be required to seek an alternative supplier and, in the interim, investment activities and other functions may be affected.

Withdrawal Risk

If a situation occurs where the assets that the Fund invests in are no longer able to be readily bought and sold, or market events reduce the liquidity of a security or asset class, there is a risk that the generally applicable timeframe of five business days for meeting redemption requests may not be able to be met.

This is because it may take longer to sell these types of investments at an acceptable price. In this case, withdrawal from the Fund may take significantly longer than the generally applicable timeframe.

The maximum timeframe in which the Trustee has to meet a redemption request is set out in the Trust Deed.

Scheme Risk

Scheme risk refers to specific risks associated with the Scheme, such as termination, changes to fees and expenses and government policies. The Investment Manager or Trustee may close the Scheme to further investments if, for example, the Investment Manager or Trustee consider it appropriate given the investment objective and investment strategy of the Scheme. The Trustee may also terminate the Scheme by notice to Unit Holders.

Your investment in the Scheme is governed by the terms of the Trust Deed and this IM (each as amended from time to time), the Corporations Act, and other laws. The value or tax treatment of an investment in the Scheme or its underlying assets, or the effectiveness of the Scheme trading or investment strategy may also be adversely affected by changes in government policies (including taxation), regulations and laws, or changes in generally accepted accounting policies or valuation methods. Such changes could also make some investors consider the Scheme to be a less attractive investment option than other investments, prompting greater than usual levels of redemption, which could have adverse effects on the Scheme.

The Investment Manager aims to manage these risks by monitoring the Fund and by acting in Unit Holders best interests. In the event of winding up the Fund, the Investment Manager will realise all the Fund's assets, which will generally result in the crystallisation of tax positions (both income and capital) at that time.

Risk Management

Core to successfully implementing the investment strategies, is managing the risks specifically associated with those strategies. The Investment Manager recognises the importance of risk management systems in terms of identification of risks, prevention, audit and integration into business operations.

Strong and disciplined risk management is a key focus for the Investment Manager. The risk management process will include:

- Internal reporting of portfolio risk and liquidity measures;
- Monitoring of risk parameters with automatic breach notification by the Trustee;
- Focusing on liquid securities where there is less pricing and liquidity risk;
- A regular review of the risk management processes by the Investment Committee.

While the risk of COVID-19 exists, the Investment Manager has implemented additional processes to ensure the continuation of the investment strategy and management of the Fund. The Investment Manager has implemented the following steps:

- The ability of the staff to work remotely;
- Remote monitoring of exposure risk occurs on a daily basis;
- All staff are upskilled on the roles of other staff to ensure that if one becomes incapacitated, the implementation of the investment strategy continues.

The Investment Manager believes these steps will ensure that the management of the Fund continues at the same level of detail as business as usual.

Buy-Sell spread

This takes into account estimated transaction costs such as brokerage costs, government or bank charges and market spreads pertaining to the acquisition or disposal of all the Assets of the Fund. These are reflected as a percentage difference between the Issue Price and the Redemption Price.

10. INVESTING IN THE FUND

Who Can Invest in the Fund?

Buy-Sell Spread

The buy/sell spread is the amount determined by the Trustee to be associated with the acquisition or disposal of Assets, being:

- (a) when calculating the Issue Price of a Unit, the amount that the Trustee reasonably estimates as reflecting any costs and expenses which would be incurred if all the Assets were to be acquired at the relevant time, per Unit; and
- (b) when calculating the Redemption Price of a Unit, the amount that the Trustee reasonably estimates as reflecting the total costs and expenses which would be incurred if all the Assets were to be sold at the relevant time, per Unit,

necessary to avoid an adverse impact on other Unit Holders because of an issue or a withdrawal of Units, but the Trustee may at any time in connection with a particular Application or Redemption treat these costs to be a lesser sum or zero.

On Application, the Buy-Sell spread is 0.2% of the Net Asset Value.

14. TAXATION

Tax Features

Investing and dealing with investments often has tax and social security implications which can be complex, and which are invariably particular to your circumstances. The tax information set out below is a broad overview of the possible Australian income tax consequences for Australian residents who invest in long term investments on capital account. That is, who are not share traders. The taxation consequences of investing differ between Unit Holders, and it is important that you seek your own professional advice before you make investment decisions.

Before investing in the Fund, investors should seek their own independent tax advice in relation to the taxation implications which may arise from investing in the Fund.

Tax Position of the Fund

The Fund has been established as an Australian resident unit trust.

If the Fund qualifies as an "attribution managed investment trust" (AMIT) for Australian tax purposes, and an election is made to treat the trust as an AMIT, components of taxable income of an AMIT will be attributed to Unit Holders on a fair and reasonable basis, rather than based on the share of the trust income to which Unit Holders are presently entitled. The AMIT tax system also includes rules for dealing with identified variances in calculating an AMIT's taxable income, increasing a Unit Holder's cost base of Units where the taxable components attributed to the Unit Holder exceeds the amount distributed, decreasing a Unit Holder's cost base of Units where the taxable components attributed to the Unit Holders are less than the amount distributed and various other changes.

Providing Your Tax File Number

The Application that forms part of this Product Disclosure Statement includes provision to quote your Tax File Number (TFN), Australian Business Number (ABN) or TFN exemption. As outlined there, you may choose not to do so, however, if you do not quote your TFN, ABN or exemption we are obliged to deduct tax at the highest marginal rate plus any relevant Government levies (including the Medicare Levy) from any income received on your behalf.

Goods and Services Tax (GST)

The Fund is registered for GST. GST is not imposed on the application for, or redemption of Units in the Fund or on any distributions from it. GST will be charged on or incorporated in various expenses paid by you, including the fees charged for managing and administering your Investment.
